

UI DESIGN PROMPT

Stock Market Prediction & Analysis System

Angular 17 • Dark Navy + Teal Theme • Professional Trading UI

Angular 17	TypeScript	TradingView Charts	LSTM AI	FastAPI	Dark Theme
------------	------------	--------------------	---------	---------	------------

This document contains a complete, ready-to-use UI design prompt for generating a professional Stock Market Analysis dashboard. Copy the prompt in Section 3 into any AI design tool (Google Stitch, v0.dev, Figma AI, Claude, ChatGPT) to get a pixel-perfect dark-themed trading interface.

1. Design System

All screens use the same color palette and typography — consistent professional trading platform look.

Element	Value	Usage
Primary Background	#0D1B2A (Deep Navy)	All page backgrounds
Card Background	#162032 (Dark Card)	Cards, panels, sidebars
Primary Accent	#0D9488 (Teal)	Buttons, active borders, highlights
Light Accent	#14B8A6 (Teal Light)	Hover states, links, icons
BUY / Success	#10B981 (Green)	Price up arrows, BUY badge
SELL / Danger	#EF4444 (Red)	Price down arrows, SELL badge
HOLD / Warning	#F59E0B (Amber)	Neutral signal badge
Primary Text	#F0F4F8 (Off White)	All readable body text
Muted Text	#94A3B8 (Slate)	Labels, captions, placeholders
Font — Headings	Inter Bold / Trebuchet MS	Section titles, stock tickers
Font — Body	Inter / Calibri	Descriptions, table content
Border Radius	8–12px on cards	All card and button corners

2. Pages & Screens

Page	Route	Purpose
------	-------	---------

Login / Signup	/auth	User authentication — JWT token based
Main Dashboard	/dashboard	Market overview, featured stocks, gainers/losers table
Stock Detail	/stock/:ticker	Full candlestick chart, AI prediction panel, indicators
Watchlist	/watchlist	User's saved stocks with live prices and signals
Settings	/settings	User profile and preferences

3. Complete UI Generation Prompt

Copy the entire text below and paste into your AI design tool. It covers all pages, all components, colors, layout, and interactions in one structured input.

Design a professional dark-themed Stock Market Prediction and Analysis web application using Angular 17 and TypeScript.

DESIGN SYSTEM:

- Background: #0D1B2A (deep navy). Card bg: #162032. Accent: #0D9488 (teal). Light accent: #14B8A6.
- BUY = #10B981 green. SELL = #EF4444 red. HOLD = #F59E0B amber.
- Text: #F0F4F8 (primary), #94A3B8 (muted). Font: Inter or Trebuchet MS.
- Cards: 8-12px border radius, subtle box-shadow, no white backgrounds anywhere.
- Style reference: Zerodha Kite / TradingView — dark professional trading platform.

PAGE 1 — MAIN DASHBOARD (/dashboard):

NAVBAR (fixed, 64px tall, full width, bg #0D1B2A with 2px teal bottom border):

- Left: Teal chart icon + "StockAI" bold white text
- Center: Search bar (dark bg #162032, teal border on focus, white text) — placeholder "Search stocks... TCS, RELIANCE"
- Right: Bell icon | Watchlist icon with teal count badge | User avatar circle with dropdown

MARKET OVERVIEW STRIP (below navbar, 56px tall, bg #162032, horizontal scroll):

- 4 index chips: SENSEX | NIFTY 50 | BANK NIFTY | NIFTY IT
- Each chip: index name (muted 10px) | value (white bold 14px) | change% (green/red 12px) | 40px sparkline
- 3px teal left border on each chip, 8px gap between chips

MAIN CONTENT AREA (2-column: left 70% / right 30%, 16px gap):

LEFT COLUMN:

"Top Stocks" heading (white bold 18px, teal left border accent):

3-column stock card grid:

Each card (bg #162032, 3px teal left border, 8px radius, padding 16px):

- Ticker: teal bold 14px (e.g. TCS.NS)
- Company name: muted 11px (e.g. Tata Consultancy Services)
- Price: white bold 22px (e.g. Rs.3,842.50)
- Change: green "up triangle +45.20 +1.19%" or red "down triangle -20.10 -0.52%"
- Mini sparkline: 80x32px, teal line if positive / red line if negative
- AI badge pill: "BUY" (green bg, navy text) | "SELL" (red bg, white) | "HOLD" (amber bg, navy)

GAINERS & LOSERS (2 tables side by side, below stock cards):

Left table — "Top Gainers" (teal header bg):

Right table — "Top Losers" (red header bg):

Both: 5 rows, columns: Rank | Ticker | Price | Change%

Alternating rows: #162032 and #0D1B2A. Last column colored green/red.

RIGHT COLUMN — WATCHLIST SIDEBAR:

Title "My Watchlist" (white bold, 2px teal underline)

5-6 rows, each row: ticker (teal) | price (white) | change% (green/red) | remove X (red)

"Add to Watchlist" full-width button at bottom: teal bg, white text, 8px radius

PAGE 2 — STOCK DETAIL PAGE (/stock/:ticker):

BREADCRUMB: Dashboard > TCS.NS (muted text, 12px)

STOCK HEADER CARD (bg #162032, full width, padding 20px):

- Left: Ticker "TCS.NS" (teal 28px bold) | Company name below (muted 13px) | "NSE" exchange badge (teal outline pill)
- Right: Price "Rs.3,842.50" (white 32px bold) | Change "up triangle +45.20 / +1.19%" (green 15px) | "Updated 2 min ago" (muted 11px)

CANDLESTICK CHART (bg #162032, height 420px, full width, padding 16px):

- Chart area bg: #0D1B2A. Grid lines: very subtle #1E3A4A.
- Up candles: #10B981 green body, green wicks. Down candles: #EF4444 red body, red wicks.
- Three toggle pill buttons above chart: "SMA 20" (blue #3B82F6) | "SMA 50" (orange #F97316) | "EMA 20" (purple #8B5CF6). Active = colored bg, inactive = outline.
- Volume bars below chart (30% height), same green/red color as candle direction.
- Timeframe tabs row: 1D | 1W | 1M | 3M | 6M | 1Y — active tab has teal underline and white text.
- Crosshair on hover showing OHLCV tooltip (dark bg card, white text).

AI PREDICTION PANEL (below chart, 2 columns: 60% left / 40% right, gap 16px):

LEFT — LSTM PRICE FORECAST (bg #162032, padding 16px, 8px radius):
 Title "AI Price Forecast — Next 7 Days" (teal bold 14px)
 Line chart (height 160px):
 - Historical line: white solid
 - Predicted line: teal dashed
 - Confidence band: teal fill with 15% opacity between upper/lower bounds
 Table below chart (7 rows): Day | Predicted Price | Change% from today
 Progress bar: "Model Accuracy: 78%" — teal filled bar on dark track, label on right

RIGHT — TRADING SIGNAL (bg #162032, padding 16px, 8px radius):
 Large signal card (full width, 80px height):
 If BUY: green (#10B981) bg, "BUY" in navy bold 28px, star icon left
 If SELL: red (#EF4444) bg, "SELL" in white bold 28px, warning icon left
 If HOLD: amber (#F59E0B) bg, "HOLD" in navy bold 28px, pause icon left
 4 factor rows below (each row: label muted | value colored | mini bar):
 RSI: value 0-100 | green if <70 (not overbought), red if >70
 Volume: "1.2x avg" | green if above average
 SMA Signal: "Golden Cross" (green) or "Death Cross" (red)
 Momentum: "Positive" (green arrow) or "Negative" (red arrow)
 Tiny disclaimer (muted 9px): "AI predictions are for informational purposes only. Not financial advice."

TECHNICAL INDICATORS ROW (4 equal cards, bg #162032, below prediction panel):
 Card 1 — RSI: semicircle gauge 0-100, needle pointing to value, zones marked (oversold/neutral/overbought)
 Card 2 — MACD: small 80px line chart showing MACD line vs signal line vs histogram bars
 Card 3 — Bollinger Bands: price position inside/outside bands shown as colored zone
 Card 4 — ATR (Volatility): large value number with trend arrow up/down and "High/Medium/Low" label

PAGE 3 — AUTH PAGE (/auth):

Full screen split layout (no navbar, no sidebar):
 LEFT HALF (bg #0D1B2A):
 - Center: Teal chart icon (64px) + "StockAI" bold white 32px
 - Tagline: "AI-powered stock market analysis for smarter investing" (muted, 14px, centered)
 - 3 feature bullets below: checkmark icon (teal) + text (muted 12px):
 * Real-time NSE/BSE data
 * LSTM price predictions
 * Buy/Sell signal alerts

RIGHT HALF (bg #162032):
 Toggle tabs "Login" | "Sign Up" (teal underline on active)

LOGIN FORM:
 Email input (label "Email Address", dark bg #0D1B2A, teal border on focus, white text, 8px radius)
 Password input (same style, eye icon inside for show/hide)
 Row: "Remember me" checkbox (teal) | "Forgot password?" link (teal, right aligned)
 "Login" button: full width, teal bg, white bold text, 10px radius, hover = lighter teal

SIGN UP FORM: Full Name input Email input Password input Confirm Password input "Create Account" button: full width, teal bg, white bold, same style as Login
Below both forms: "By continuing you agree to our Terms of Service" (muted 10px, center)
GLOBAL COMPONENTS (apply across all pages):
Loading skeleton: dark shimmer animation from #162032 to #1E3A4A cycling 1.5s, for cards and chart areas while data loads.
Toast notifications (bottom-right, slide-in animation): Success: teal left border, dark bg, checkmark icon, white text Error: red left border, dark bg, X icon, white text Duration: 3 seconds then slide out
Responsive behavior: Desktop: full layout as described Tablet (768-1024px): watchlist sidebar collapses to floating icon button Mobile (<768px): navbar becomes hamburger menu, single column layout, chart height 260px
Number formatting: All prices in Indian format: Rs.1,23,456.78 All large numbers in Indian lakhs/crores: 1.2L, 45.3Cr
Price flash animation: When price updates, cell background flashes green (if price went up) or red (if price went down) for 600ms then fades back.
Empty states: Watchlist empty: teal bookmark icon centered + "No stocks added yet. Search above to add." (muted text) No prediction: "Prediction loading..." with teal spinner

4. Angular Component Breakdown

Structure your Angular project with these components:

Component	Selector	What It Renders
NavbarComponent	app-navbar	Top nav bar — search, watchlist icon, avatar dropdown
MarketStripComponent	app-market-strip	Scrollable SENSEX/NIFTY index chips strip
StockCardComponent	app-stock-card	Individual stock card — price, sparkline, AI badge

StockGridComponent	app-stock-grid	3-column grid of StockCard components
GainersLosersComponent	app-gainers-losers	Two side-by-side gainers and losers tables
WatchlistComponent	app-watchlist	Sidebar watchlist with add/remove functionality
CandlestickChartComponent	app-candle-chart	TradingView chart with overlay toggles + timeframe tabs
PredictionPanelComponent	app-prediction	LSTM forecast line chart + Buy/Sell signal card
TechIndicatorsComponent	app-indicators	RSI, MACD, Bollinger Bands, ATR mini cards
AuthComponent	app-auth	Login/Signup split-screen layout
StockService	services/stock.service	All FastAPI HTTP calls via Angular HttpClient
AuthService	services/auth.service	JWT login, signup, token storage, auth guard

5. FastAPI Backend Endpoints

Angular will call these endpoints using HttpClient. All return JSON.

Method	Endpoint	Returns
GET	/stock/{ticker}	OHLCV price array for candlestick chart
GET	/market/overview	SENSEX, NIFTY values + top 5 gainers/losers
GET	/predict/{ticker}	LSTM 7-day price array + Random Forest signal
GET	/indicators/{ticker}	RSI, MACD, Bollinger, ATR values
GET	/watchlist	All saved stocks for current user
POST	/watchlist/add	Save a stock ticker to user watchlist
DELETE	/watchlist/{ticker}	Remove a stock from watchlist
POST	/auth/login	Validate credentials, return JWT access token
POST	/auth/signup	Create new user account, return JWT token

6. Recommended AI Design Tools

Paste the prompt from Section 3 into any of these tools:

- > **Google Stitch**
Best for Angular-ready component generation. Gives full HTML/CSS/TS output.
- > **v0.dev (Vercel)**
Fast visual prototyping. Generates React — easy to convert to Angular.
- > **Claude / ChatGPT**
Paste prompt and ask for Angular component code directly with SCSS.
- > **Figma AI**
Use for wireframes and layout planning before writing code.
- > **Locofy / Anima**
Convert Figma designs to Angular-compatible component code.

7. Quick Start Checklist

- 1 Create Angular project**
`ng new stock-market-app --style=scss --routing=true`
- 2 Install chart library**
`npm install lightweight-charts`
- 3 Install Supabase/HTTP**
HttpClientModule is built-in — import in app.module.ts
- 4 Add global color variables**
Define CSS variables in styles.scss using the color palette in Section 1
- 5 Generate all components**
`ng generate component dashboard/navbar` (repeat for each component in Section 4)
- 6 Create stock service**
`ng generate service services/stock` — handles all FastAPI HTTP calls
- 7 Create auth service**
`ng generate service services/auth` — JWT login, guards, token storage
- 8 Start FastAPI backend**
`uvicorn main:app --reload` (runs on localhost:8000)
- 9 Configure CORS**
Add `http://localhost:4200` to FastAPI `allow_origins` in main.py
- 10 Deploy**
`vercel --prod` for Angular + `render.com` for FastAPI (both free)

Project Note: This prompt document covers the complete UI design specification for the Stock Market Prediction & Analysis System. The color palette, components, and API endpoints are all aligned with the Angular 17 + Python FastAPI + LSTM + Random Forest architecture. Use the Section 3 prompt as input to any AI design or code generation tool to scaffold the frontend rapidly.
